

# The Slitter / Creaser

From:

**CMSR**

CONVERTA MACHINERY  
**SHORT RUN**

A critical component in most Sheet plants is the slitter creaser. Owning a machine of this type provides you with true flexibility plus the ability to cut down a stocked sheet size and run it, as opposed to waiting for a board delivery. This assures you of being able to produce what you want, when you want it.

As far as slitters go, they don't come any better than this offering from 'Converta Machinery Short Run Equipment'. With a width of 3000mm it truly is a wide format machine. The machine consists of 6 bars. These contain 2 pull collars, 4 sets of slitting heads and 6 sets of creasing heads. These are fully adjustable through handles on the side of the machine and can be locked into position. This machine earns the title 'Heavy Duty' by being able to cut through the toughest board, right up to and including heavy 'Twin-cushion' boards. All the slitting and creasing heads are easily moved into position by loosening the collar with the supplied 'T' Bar, making this machine very simple to set up.

## **Features:**
