

The Vertical Slotter

From:

CMSR
CONVERTA MACHINERY
SHORT RUN

At Converta Machinery, we pride ourselves on our ability to provide a comprehensive range of corrugating and converting machinery to our customers, at the best possible price. The 'Vertical Slotter' is an integral part of many short run box plants. Everyone acknowledges that it is by no means the fastest method for producing RSC (Regular Slotted Cartons) but the value lies in the machines' flexibility. There is no limit to the size of board that can be fed into the vertical slotter, providing you with the ability to produce small RSC's right up to the large style boxes that would accommodate a household washing machine or fridge.

This "Vertical Slotter" from Converta Machinery Short Run Equipment is a 'no frills' machine at a 'no frills' price. Yet it is still everything you need to safely and professionally produce RSC's. The 'CMSR' range has been in the Australian market for several years. In that time it has carved out its' reputation as a reliable and affordable supplier of 'hand fed' converting equipment. The 'Vertical Slotter' was created with the same philosophy, 'Quality product at an affordable price'. Read through the features, I think you'll agree this machine provides excellent value for money.

Should you require any further information please contact one of our helpful staff via the contact details at the bottom of the page.
