Sheet Fed Laminator

BOTTOM SHEET MATERIAL	Corrugated Cardboard thickness from 0,5 ÷ 6 mm
TOP SHEET MATERIAL	Cover Paper or cardboard from 100/150 ÷ 500 g/m2 (1200)
MAXIMUM SHEET SIZE	Width 1400 / 1600* mm X Length 1400 / 1600* mm
MINIMUM SHEET SIZE	Width 500 mm X Length 500 mm
MACHINE SPEED	Up to 8000 Sheets Per Hour (Dependent on job size and top sheet weight)

Sheet fed laminators offer a printing business a huge growth potential. Basically, the function of a laminator is to glue a sheet of printed paper to corrugated board. This process gives you an extremely high quality corrugated sheet to die cut, without the huge investment normally required to print to corrugated board. High quality also means high profit, some of the niche industries that currently use laminated board include the Cosmetics and Wine Industries. The Grassi is a simple to use machine requiring little operator knowledge and short set-up times. What separates the Grassi from other machines on the market is its unique "Gate Register System" this allows a precise placement of the top sheet (label) to the bottom corrugated sheet. If the distance between the front edge of the top and bottom sheets varies it makes it impossible to produce a good in-register die cut. The designers of The Grassi Compact had this in mind when designing the machine, the result is an excellent machine that provides first class results every time..
