

**Best value for money package product on the market**

# KASEMAKE

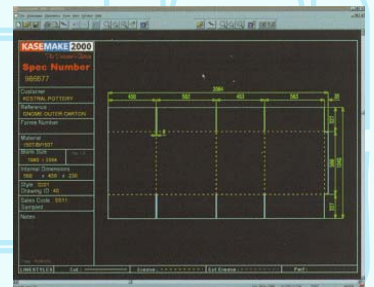

By **AG/CAD**

At Converta, we realise it takes something special to get people excited about box design software. If any box design package is going to excite you... It will be Kasemake. The features in the newly released Version 5 make it the most technologically advanced packaging software to date. Here are some reasons why you should call us and book an obligation free demo today.

- Full Range of cardboard and carton resizable designs. Conform to long standing International standards
- Advanced drawing and edit features have been specially designed with the aim of making the drawing process simple.
- A full Microsoft Access database is included, to ensure that cataloging jobs is a simple task. The database is fully customizable to meet the requirements of any plant.
- Job Tickets can be created in just a few clicks of the mouse, these job tickets can be created and edited to suit your needs.

- A full 3D system is included. See what your box looks like assembled. Find any problems before the sample is created. Overlay your artwork. Version 5 includes the ability to create a fully interactive 3D design viewable in any internet browser supporting VRML plug-in's.
- Full range of Import/Export filters ensure you can be compatible across any platform... Import filters include DXF and EPS, Output filters include PDF
- Open driver architecture ensures that if you have a HPGL based plotter we can talk to it
- Runs on any Windows platform Windows 95 onwards
- Automatic layout commands ensure you will get the most out of your sheet.
- Advanced die-making features include bridging for flat and rotary dies, stripping pin placement, serrated blade placement on rotary dies. And many more.
